

MEKORMA 

What If Managing AP *Could Be Easy?*

Embedded Accounts Payable solutions designed to help organizations simplify payment workflows, strengthen controls, and deliver measurable value inside Microsoft Dynamics 365 Business Central.

The AP Reality

Accounts Payable Carries Real Responsibility

Every payment affects cash flow, compliance, and vendor trust.

For organizations running Microsoft Dynamics 365 Business Central, managing accounts payable means balancing efficiency, security, and control inside the ERP environment.

AP teams must ensure vendor data is accurate, payments are approved properly, and funds are delivered securely, often while managing growing transaction volumes and evolving compliance requirements.

This is where Mekorma helps →

The Mekorma Approach

Bringing Clarity to Payment Workflows

Mekorma is dedicated to helping organizations bring clarity, control, and ease to payment workflows with embedded solutions designed for Microsoft Dynamics 365 Business Central.

We simplify how payments are built, approved, and delivered. Our solutions are thoughtfully designed to reduce risk while supporting smoother, more confident AP operations.

At the center of this approach is Mekorma Payment Hub, which brings payment controls, vendor validation, and payment execution together inside Business Central.

Embedded By Design

Built directly into the ERP, Mekorma supports secure payment controls, cleaner vendor data, and more efficient workflows *from start to finish*.

Grounded In Experience

Our work in Business Central is grounded in over 30 years of Accounts Payable expertise. Mekorma earned its reputation as the trusted payment solution in Dynamics GP, supporting more than 5,000 customers and hundreds of partners.

That experience continues to shape how we design for AP teams today and in the future.

Focused On What Matters

As the ERP landscape evolves, our focus remains steady. We help AP teams stay in control, reduce risk, and build payment processes that support long-term business health.

We focus on Accounts Payable. And we do it well.

Everything You Need for Secure, Compliant & Timely Payments— *All Inside Business Central*

With Mekorma Payment Hub,
organizations gain a structured
approach to managing payments
directly inside Microsoft Dynamics
365 Business Central.

Because Mekorma is built natively within the ERP environment:

Embedded Simplicity

Mekorma works directly within Business Central, supporting familiar tools like payment journals, approval workflows, and vendor records, bringing everything together in one place.

AP Depth Without Diluting Focus

Mekorma specializes exclusively in Accounts Payable, allowing organizations to strengthen their payment processes without adding unnecessary system complexity.

Compliance Confidence

Capabilities like TIN validation and OFAC screening support organizations in maintaining vendor compliance aligned with U.S. requirements.

Migration Continuity

Organizations transitioning from Dynamics GP to Business Central can maintain familiar payment workflows while modernizing their ERP experience.

100% Built Inside

- No integration required
- Simplified implementation
- Easy check setup
- Streamlined payment processing
- Scales as organizations grow

Start With Vendor Data You Can Trust

Vendor Validation

Accurate vendor data is the foundation of secure payments.

With Mekorma Vendor Validation, organizations can automatically:

- Confirm Tax Identification Numbers (TIN Matching)
- Validate vendor name and EIN combinations against IRS records
- Verify vendor business addresses
- Screen vendors against OFAC sanctions lists

Validation happens directly within the Business Central environment, helping organizations maintain cleaner vendor data and stronger oversight from the moment vendors are added.

Why It Matters

Vendor Validation helps organizations:

- Reduce compliance risk
- Strengthen separation of duties
- Improve vendor data integrity
- Avoid costly year-end corrections

Bring Structure & Ease
To Payment Processing

Action Board

As organizations grow, managing payment batches can become increasingly complex.

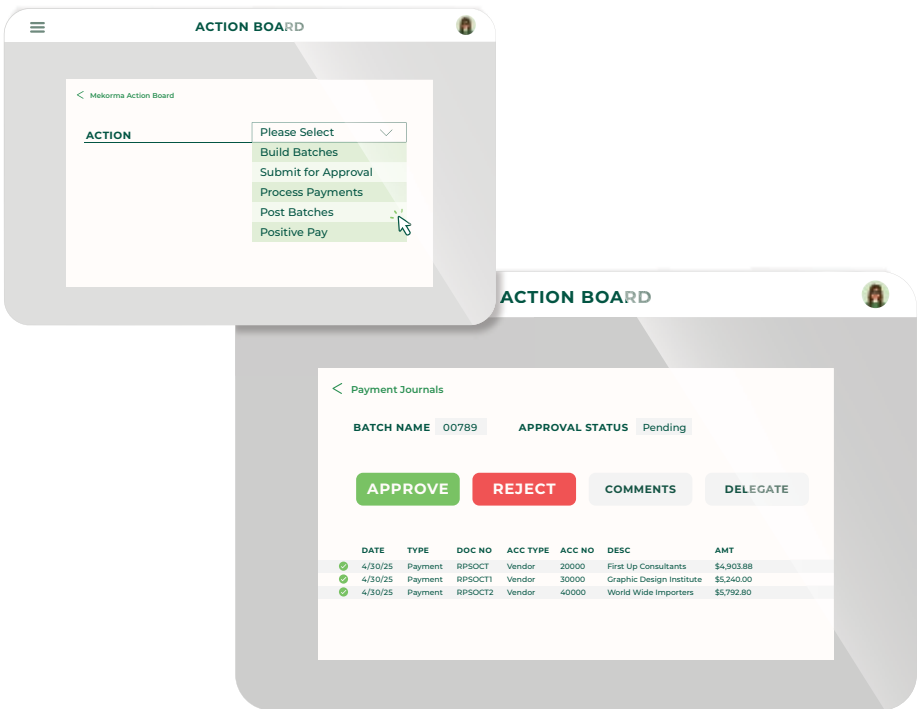

Mekorma Action Board brings structure and visibility to payment processing by allowing AP teams to build, review, approve, and process batches from a centralized dashboard inside Business Central.

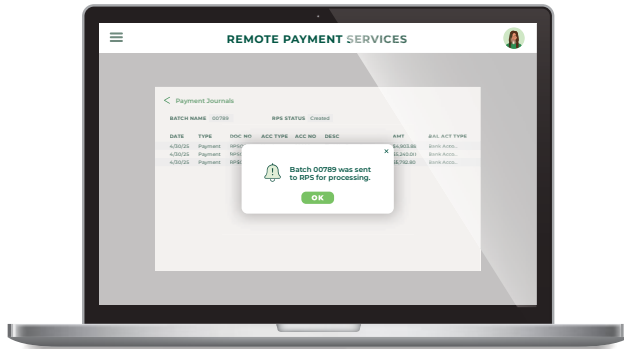

This structured approach supports stronger approval workflows and clearer oversight throughout the payment cycle.

Why It Matters

Action Board helps organizations:

- Reduce manual batch handling
- Strengthen internal payment controls
- Improve visibility across payment cycles
- Support growing and multi-entity organizations

Deliver Payments Securely With Cloud-Based Payment Execution

Remote Payment Services

Once payments are approved, organizations need to ensure they are delivered securely and efficiently.

With Mekorma Remote Payment Services, organizations can:

Outsource Check and ACH Processing

Payments are built and approved in Business Central, then securely transmitted for fulfillment. AP teams no longer need to manage printing, mailing, or bank file uploads.

Offer Vendor Payment Flexibility

Vendors receive payment by check, ACH, or virtual card based on their preference.

Reduce Fraud Exposure

Professional payment handling and structured workflows help lower risk across the payment cycle.

Remote Payment Services works in tandem with Mekorma Payment Hub inside Business Central, maintaining ERP controls, visibility, and separation of duties while reducing operational strain.

Why It Matters

RPS helps organizations:

- Reduce manual payment workloads
- Support remote and hybrid AP teams
- Lower payment processing costs
- Capture potential virtual card rebates
- Create a more secure, scalable payment process

— Easily Manage Payments Across Multiple Entities

Shared Services — Multi-Entity

For AP teams managing payments across multiple subsidiaries, divisions, or operating entities, Mekorma Shared Services simplifies payment processing and removes the need for manual workarounds or disconnected systems.

Mekorma Shared Services centralizes payment processes while maintaining visibility and compliance across entities.

Why It Matters

Shared Services — Multi-Entity helps organizations:

- Centralize payment control
- Simplify batch processing across entities
- Maintain compliance and oversight
- Reduce manual risk
