

This document outlines all necessary licensing and system requirements that will allow your organization to start approving payments with Mekorma Power Approvals. To request a consultation with an implementation expert, [click here](#).

Power Apps Subscription

Your business will need a Power Apps subscription from Microsoft in order to access Mekorma PowerApprovals. The Power Apps subscription model offers per-app or per-user licensing.

To purchase Power Apps for an organization, you must already be an Office365 Global or Billing Admin of a tenant, or you must create a tenant.

- **Option #1: Run single apps**

- Customers can run applications around a single business scenario for an individual user
- \$5 per user/per app/per month
- Maximum 1 app and 1 portal

Here's an example of a Single App licensing scenario:

Your organization has 3 Approvers that use Mekorma PowerApprovals.

$3 \times \$5$ per user/per app/per month = \$15/month. Yearly investment = \$180

- **Option #2: Run unlimited apps**

- Use this option if you run two apps or more (in addition to PowerApprovals)
- \$20 per user/per month

Here's an example of an Unlimited Apps licensing scenario:

Your organization has 3 Approvers that use Mekorma PowerApprovals.

$3 \times \$20$ per user/per month = \$60/month. Yearly investment = \$720

- **Option #3: Pay-as-you-go plan**

- \$10 per active user/app/month

- **For additional licensing information, [click here](#).**

- **In addition to the Power Apps license, a SQL Server premium connector is required:**

- This is included with both the single app or unlimited app licensing. PowerApprovals makes use of the connector in both the app and the triggered flow.
- It is needed to execute the approval procedures at the database server level.

On-premise Data Gateway

The Data Gateway can be installed on any server with line of site to SQL Server.

Deployment

The data gateway can be deployed centrally and allows you to manage data connections for multiple cloud apps so you need to install only one gateway to enable cloud to on-premises data connections. Once the gateway is installed, it is available in all supported apps and can be used to set up multiple on-premises data connections.

Installation Requirements

- Windows 10, Windows Server 2012 R2, Windows Server 2008 R2, Windows Server 2012, Windows 7, Windows 8, Windows Server 2016, Windows Server 2019
- Net Framework 4.7.2 or greater

Microsoft Dynamics GP

The following requirements must be met in order to run Mekorma PowerApprovals:

- **Your organization must possess valid licenses for Microsoft Dynamics GP**
- **You must have valid licenses for Mekorma Payment Hub**
 - The Mekorma Action Board is not required
 - Task-Based Security must be configured and email settings must match GP user account with Azure AD account
- **You must have valid licenses for Mekorma PowerApprovals**
