THE FUTURE OF AP AUTOMATION

Key trends and innovations

The rise of advanced analytics and AI

Continuous innovation in this area is revolutionizing the AP process and improving efficiency while empowering companies with detailed metrics for better financial management.

Financial management on the go

As with most other functions, AP departments have rapidly adopted remote work best practices over the past few years. One of the strongest signals of this is the rise of mobile approval workflows to manage vendors and transactions.

Collaboration and productivity

Another result of cloud-based solution adoption is improved collaboration and a focus on team wide productivity. In the context of Accounts Payable, this collaboration extends outside of the finance team to include other stakeholders involved in the revenue cycle and vendors.

Security and compliance

AP departments encounter a large number of security and compliance challenge that could jeopardize the integrity of the function. A common way to minimize this risk in AP is through outsourcing payments to a trusted solution provider.
